Disclaimer:

The images shown are for illustrative purposes only. The colours and details shown may differ when the vehicle is available due to technical and/or production and/or commercial reasons. Some images may include accessories and/or equipment that is not standard on all models and will be subject to additional payment when the vehicle becomes available.

LEGAL NOTES -> TO BE CHECKED TO EACH MARKET

The value of CO₂ emissions, electric range (if applicable) and fuel consumption are defined on the basis of official tests in accordance with the provisions of Regulations in force at the time of type approval. In particular, the indicated values are determined according to the WLTP test procedure. Only compare fuel consumption, CO₂ and electric range (if applicable) figures with other cars tested to the same technical procedures. For PHEV vehicles the figures were obtained using a combination of battery power and fuel. For BEV vehicles the figures were obtained after the battery had been fully charged. Both PHEV and BEV vehicles require mains electricity for charging.

The CO₂, electric range (if applicable) and fuel consumption values obtained according to the applicable legislation are indicated in order to allow the comparison of vehicle data. The homologation values of CO₂ electric range (if applicable) and fuel consumption may not reflect the actual values of CO₂, electric range (if applicable) and fuel consumption, which depend on many factors related, by way of example but not limitation, to the driving style, the route, the weather and road conditions, the condition, use and equipment of the vehicle.

The reported values of CO₂, electric range (if applicable) and fuel consumption refer to the basic version of the vehicle and may change during the next configuration phase depending on the type of equipment and / or the size of the tyres which will be selected.

The CO₂, electric range (if applicable) and consumption values of the configured vehicle are not definitive and may evolve as a result of changes in the production cycle. In any case, the official CO₂, electric range (if applicable) and consumption values of the vehicle purchased will be supplied with the documents accompanying the vehicle.

In cases where the values of CO₂, electric range (if applicable) and fuel consumption are relevant for the purposes of calculating taxes and costs related to the vehicle, reference should be made to the applicable laws.

THANK YOU
